# ECOSTREAM™

## COMPACT TANK SYSTEMS

"We have found Streamline systems to be professional, honest and very good value for money."

Benjamin Blackman - Purity Solutions

"All the team at Varitech are fantastic! Very helpful and knowledgeable, certainly my go to for any window cleaning products."

Mark Hartnell - All Clean

## SYSTEM FEATURES

- Streamline lithium-ion compact removable battery with USB port to charge devices
- Streamline SFC16 controller with battery voltage level
- Optional DI filtration
- Shut off fill float
- Water level site gauge
- Crash tested Z-Profile securing flange

## Ergonomic water delivery system

Due to its compact size and the fact that all components are housed within the tank, the Ecostream™ takes up little space, even in smaller vans, allowing room for other equipment. Supplied ready for use / easy installation, the Ecostream range varies from 255 litres to 700 litres.

The Ecostream™ tank systems represent excellent value for money. They can be fixed into vehicles permanently without the need for a stainless steel frame. This allows significant savings to be made compared to traditional systems, without compromising the professional image that window cleaners always strive for. These tanks are constructed as water delivery systems or DI filtration, baffled to restrict water movement in transit.

## Deionized Filtration

Firstly, large particles such as muck, dirt, and other visible debris are removed from the water through an initial filtration process.

Then, the water passes through a resin bed, removing ions such as calcium and magnesium and replacing them with hydrogen. Additionally, it removes chloride and sulphate, creating hydroxide.

Hydrogen and hydroxide molecules bond together to form pure water, ensuring a streak-free and spotless finish.

### OPTIONAL DI FILTRATION

Deionised filtration involves passing water through a resin bed where ions like calcium, magnesium, iron, and sodium are exchanged for hydrogen and hydroxyl ions, resulting in highly purified water.

### EFFICIENT BATTERY

All Ecostream™ tanks contain a lithium-ion battery, which can be easily removed for recharging. (No need for a complex split charge system.)

### BRAND NEW DESIGN

Ecostream™ has been a staple tank system for many years. Our latest model is the best yet, with easy access to pumps, batteries, and upgraded controllers.

### YOUR SAFETY IN MIND

The Streamline® Ecostream™ range uses the Z-profile securing flange, which we have extensively crash-tested to ensure the highest safety precautions for our customers.
